

## **Voltas wins two water treatment orders totalling Rs 38 crores**

Voltas has secured two sizeable orders totalling Rs 38 crores: one from Tata Steel for a 25 MGD water treatment plant at Jamshedpur, and the other from Kolkata Metropolitan Water & Sanitation Authority for a 15 MGD water treatment plant as well as a UGR-cum-pump station of 0.75MGD capacity.

These two substantial orders add up to credentials which put Voltas firmly in the running - and the bidding - for future water treatment projects of such higher capacities. It's also a technology offering which can be well integrated into the electro-mechanical works package, yielding a total solution that would be especially welcome in the steel and power sectors.

Voltas won the Jamshedpur order against strenuous efforts from the competitor who had built Tata Steel's three earlier water treatment plants; the competition was equally daunting for the Kolkata project. Both successes testify to clients' confidence in Voltas' proven technological capabilities, and its record of reliable project execution, in water management as well as electro-mechanical works.

Water-related technologies are predicted to be the wave of the future. If so, Voltas is certainly riding an outbound tide.
