

Voltas enters into strategic international textile technology tie-ups

With a view to leveraging emerging opportunities in the technical textiles industry, Voltas has commenced tying-up with machinery manufacturers (principally from Europe) who are regarded as the best in their fields, with the ability to fulfil European quality norms while remaining cost-effective. These include:

- Dilo Group, for non-woven products
- Brueckner, for coating and finishing of textiles
- Hansa Mixers, for coating or finishing material preparation • Wumag Texrolls, for heat setting and surface finishing of technical textiles

These will follow recently completed tie-ups with some strategically identified and highly specialized principals, for very specific product lines. These are expected to add substantial value to Voltas' range of product and service offerings, towards achieving the status of 'total solutions provider' in post-spinning. The principals are:

- Reggiani Macchine, Italy, which is well established in rotary, flat bed and digital printing applications.
- Dunline Rubber, Canada, the world's most preferred supplier of specialised rubber belts for various textile finishing machines
- Canalar Group, Turkey, which specialises in dyeing machinery for yarn and fabrics (both knits and wovens) in batch form
