

Tata Steel entrusts Voltas with HVAC works for steel mega-project at Kalinganagar

Once again, Tata Steel shows its confidence in Voltas' capabilities – with an order largely for HVAC works at its greenfield Kalinganagar Steel Plant.

For Voltas, the order represents not just a business opportunity, but also a way to help transform lives in this backward and depressed region of Odisha state.

The project is in addition to work already in hand for Tata Steel's previous order, predominantly for water treatment solutions (along with HVAC installations for steel mills and control rooms).

Tata Steel's latest order includes

- » **chilled water system with SITC of 8 centrifugal chillers (1250TR capacity each)**
- » **electrical substation**
- » **air conditioning system for areas of the integrated steel plant, featuring 156 AHUs and 83 packaged units**
- » **low side works**
- » **ventilation system with 620 tube axial fans and 22 air washers**

The entire job is to be completed within 12 months, a challenging time-frame indeed...but, as usual, well within ***Voltas' proven capabilities***.
